DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention: Specie 1 (claims 1-5, 9-13, and 17-21): a filter screen comprising a metal woven mesh, which is classified in Class 442, Subclass 6; and Specie 2 (claims 6-8, 14-16, and 22-24): a filter screen comprising synthetic woven fabric, which is classified in Class 442, Subclass 181.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1771

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. During a telephone conversation with Dale Lazar on May 12, 2003, a provisional election was made with traverse to prosecute the invention of Specie I, claims 1-5, 9-13, 17-21. Affirmation of this election must be made by applicant in replying to this Office action. Claims 6-8, 14-16, and 22-24 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5, 9-13, and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Sicard (US 3,674,154). Sicard discloses a filtration apparatus. The filtering member comprises a woven wire mesh (i.e. a metal mesh) wherein the layers are bonded together by brazing or sintering or welding (col 1, ln 55-65).

5. Claims 1-5, 9-13, and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Koehler (US 4,613,369). Koehler discloses porous metal articles find particular use as filters (abstract). The filter comprises woven wire mesh (col 2, ln 21-23). The mesh is preferably a metal wire mesh screen (col 2, ln 38-40). The porous articles may be joined and formed into various shapes by brazing and melding (col 9, ln 35-39).

Art Unit: 1771

6. Claims 1-5, 9-13, and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Webb et al. (US 5,373,615). Webb et al. disclose a filtration screen wherein the screen is made with filaments that have been coated with brass and have been woven into a mesh to form the screen (abstract). The wire filaments are made of carbon steel wires (col 2, ln 25-26). With regard to claims 2, 3, 10, 11, 18, and 19, it should be noted that the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ula C Ruddock whose telephone number is 703-305-0066. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 703-308-2414. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
